

When I get to the emergency room I will need to check in at the desk.

A nurse will ask questions to see what kind of help I need.

The nurse will take my temperature and blood pressure.

I may need to wait in the waiting room.

There may be many people in the waiting room with lots of noises.

If there are too many people or too much noise I can ask for a quiet place to go.

IN THE EMERGENCY ROOM FOR A MENTAL HEALTH CRISIS

I may go into a room that just has a bed and a chair in it.

They may lock the door to the room to help me stay safe.

My family, staff or a trusted adult can stay with me in the room.

I will talk to different doctors and nurses about the thoughts and feelings I'm having.

The doctors and nurses may give me medicine to help me feel better and relax.

I may need to stay in the hospital for a few days to get more help.
